antiherpes agents that lack crossresistance to the currently available
class become available, issues relating to
misuse and resistance will need to be
thoroughly evaluated in an actual use
setting of an antiviral agent for recurrent
herpes labialis, particularly if OTC
marketing is proposed sometime in the
future. At present, based on a public
health-based risk/benefit assessment
with respect to treatment of herpes
labialis, the agency concludes that
antiherpes agents should not be made
available OTC.

This draft guidance is being issued consistent with FDA's good practices (62 FR 8961, February 27, 1997). The draft guidance represents the agency's current thinking on OTC treatment of herpes labialis with antiviral agents. Its does not create or confer any rights for or on any person and does not operate to bind FDA or the public. An alternative approach may be used if such an approach satisfies the requirements of the applicable statute, regulations, or both.

Interested persons may submit to the Dockets Management Branch (address above) written comments on the draft guidance. Two copies of any comments are to be submitted, except that individuals may submit one copy. Comments are to be identified with the docket number found in brackets in the heading of this document. The draft guidance and received comments are available for public examination in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday.
